Evening Brief

Date: Saturday August 19, 2017

Weather Summary

Warm, dry and breezy weather will move into the northern half of the Great Basin through Sunday while isolated to widely scattered showers and thunderstorms are expected further south.

Generally dry conditions with warming temperatures will continue across the north through mid-week next week. Moisture in place across the southern Great Basin will generate daily afternoon thunderstorms through the weekend, especially over the higher elevations of Utah and over central and southern Nevada.

An approaching low pressure system out of the Pacific NW will draw moisture into southern Idaho/Western Wyoming for the second half of the work week for isolated to scattered showers and thunderstorms, especially over the higher elevations of east central Idaho and western Wyoming.

Preparedness Levels

Great Basin	3
National	5

Great Basin Fire Activity (from Irwin): Light Activity

New Fires and Acres: 10 fires for 260.55 acres; 2,757 acres large fire growth; 0 new large fires

Resources:

- Crews: 9 T1 IHCs in GB: 7 committed, 2 Available.
 - GBCC has committed an estimated 31+ Type 3, 4, 6 engines.
 - 5-T1 and 9-T2 helicopters are available in GACC.
-

Great Basin Fire Potential Summary

Fuel across much of the area are slowly drying and recovering from the monsoonal moisture earlier in the summer, with fire danger values at or below normal for the time of year. Continued dryness across the north will allow fuels to further dry for increasing large fire potential. An increase in southerly moisture will help to keep fire potential moderated across the south and east through the period.

We continue to have a Great Basin Fuels and Fire Behavior Advisory in effect for Nevada, Idaho and Utah, available at the following link:

https://www.predictiveservices.nifc.gov/fuels_fire-danger/GB_Fuels_and_Fire_Behavior_Advisory.pdf
